

Form2Content Template Parameter List

The F2C template parameters are used in the F2C templates and are the "placeholders" for the data from the submission form.

Whenever you see a parameter with the <fieldname> annotation it means you need to **replace** it with YOUR fieldname.

All parameters (your fieldname included) need to be written in CAPITALS with a \$ in front: {\$MY_FIELDNAME}

RAW output can be set in field configuration. You will then need to build your own HTML tags but have full control.

For examples of use please see our **documentation website**: <http://documentation.form2content.com>

Don't forget, F2C also has some great extensions like **Form2Content SEARCH** and **Form2Content KML Feeds!**

Enjoy and thank you for using F2C!
